

## Increasing and Decreasing Intervals

**We can use derivatives to identify the intervals where a function is increasing or decreasing and identify the relative max/mins by using the following rules:**

**If  $f'(x) > 0$  for all  $x$  in  $(a,b)$ , then  $f$  is increasing**

**If  $f'(x) < 0$  for all  $x$  in  $(a,b)$ , then  $f$  is decreasing**

**If  $f'(x) = 0$  for all  $x$  in  $(a,b)$ , then  $f$  is constant**

**Demo**

## Find Inc/Dec Intervals and Rel. Max/Mins

$$f(x) = 27x - x^3$$
